

1. Open draw.io either web app or desktop app
2. Create a blank diagram
3. Select the rectangle shape

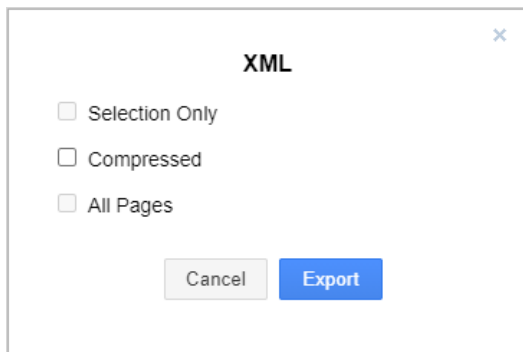

4. Rectangle represents an entity like CDS, data base table or relation between two different entities
5. Example: The new entity that needs to be created should contain SQL viewname and * symbol at the end. This helps us in identifying the new object.

6. Once done go to File-> Export as-> XML

7. Once the pop up comes unselect Compressed option

A dialog box titled "XML" with a close button (X) in the top right corner. It contains three unchecked checkboxes: "Selection Only", "Compressed", and "All Pages". At the bottom, there are two buttons: "Cancel" and "Export".

XML

☐ Selection Only

☐ Compressed

☐ All Pages

Cancel Export

8. Upload the downloaded file in our app.
Voila!!! Your CDS views will be created.
